Subject: Application for Backend Software Engineer Position

Dear Hiring Manager,

I am excited to apply for the Backend Software Engineer position. With 5+ years of experience as a Full Stack Developer, I specialize in PHP/Laravel, Vue.js, JavaScript, and MySQL, along with expertise in cloud hosting.

I thrive in collaborative environments using tools like Jira, Git, and Slack and am passionate about writing clean, efficient code. I have also been learning Python and machine learning, which further strengthens my technical foundation. My experience with live deployments on Digital Ocean/Nginx aligns well with your requirements, and I would welcome the opportunity to contribute to your team.

Thank you for your time.

Best regards,
MD. Anikul Islam
